

Business Requirements Document (BRD)

Project: Core Banking System Modernization

The purpose of this document is to outline the key business requirements for the design and development of a modern banking system. This system will support customer onboarding, account management, payments, loans, and reporting while ensuring compliance with banking regulations and security standards.

1. Business Objectives

- Enhance customer experience through seamless digital banking channels.
- Reduce manual processing by automating key banking operations.
- Ensure compliance with POPIA, FIC, PCI DSS, and SARB regulations.
- Enable real-time monitoring of transactions to detect fraud.
- Provide scalable, secure, and highly available system architecture.

2. Functional Requirements

ID	Requirement Description	Priority
FR001	Customer onboarding with ID verification and KYC.	High
FR002	Open and manage savings and current accounts.	High
FR003	Perform internal and external fund transfers.	High
FR004	Generate statements and reports (PDF, CSV).	Medium
FR005	Process debit orders and scheduled payments.	High
FR006	Manage loan applications and disbursements.	Medium
FR007	Provide 2FA authentication for online access.	High

3. Non-Functional Requirements

- System uptime of 99.9% or higher.
- Data encryption at rest and in transit using AES-256 and TLS 1.2+.
- Response time for transactions under 3 seconds.
- Support up to 100,000 concurrent users.
- Audit logging and traceability for all critical actions.

4. Compliance & Regulatory Requirements

The system must adhere to the following regulations and standards: • POPIA – Personal data protection and user consent handling. • FIC Act – Customer due diligence, reporting, and record keeping. • PCI DSS – Secure card data storage and transaction processing. • SARB – Banking compliance and reconciliation standards.

5. Deliverables

- Requirements specification document (BRD & FRD).

- Functional banking application with Web and Mobile interfaces.
- Integration with AML/Fraud systems and payment networks.
- System test results and user acceptance documentation.
- Deployment and training materials.
